

iTAM DISASTER RECOVERY VS. WANNACRY RANSOMWARE

WannaCry ransomware cyber attack: 104 countries hit, critical infrastructure like UK NHS worst affected, US NSA attracts criticism...

WannaCry ransomware attack (one of the largest ever cyber attacks) infected in the matter of days over 200,000 systems around the world, a tracker showed. Anti-virus provider Avast, gave a more conservative estimate of around 126,000 systems being affected. It appeared to be slowing around 24 hours after it wreaked havoc and shut down tens of thousands of computer systems across 104 countries shortly after a Britain-based security researcher, accidentally discovered a 'kill switch' to halt the WannaCry attack.

Experts, however, warned that enterprising hackers could circumvent MalwareTech's fix.

iTAM delivers a complete toolset

The management of complex and distributed IT environments is challenged with un-scaleable operational downtimes causing severe financial business impact. Swift recovery is the insurance of IT management and is the key factor of today's IT security challenges.

Minimum recovery time

is in particular essential for business critical applications (downtime/loss of sales/liability for damages) to stay operational and to minimize financial losses.

iTAM uses a stand-alone (non US origin) software solution

with an open architecture, that installs any operating system on various clients:

- Windows 3.1/ME/SE/NT/2000/2003/XP/VISTA/7/8/10
- Linux, RedHat, SuSE, YDL, Mandrake, Ubuntu, Debian, etc.
- Solaris 6/7/8/9/10 auf Sparc und Intel
- FreeBSD, MacOS X, OS2
- Tru64, Reliant, Irix, AIX, HPUX ...
- NetWorker Backup Server (EMC)
- NetWorker Server (Oracle)

WHY iTAM ?

OPERATING-SYSTEM-
INDEPENDENCE
SECURITY FOR YOUR
IT INFRASTRUCTURE

INVENTORY WITH
OPEN MANAGEMENT
SYSTEMS
ARCHITECTURE

INVENTORY AND
DISASTER RECOVERY
COMBINED IN ONE
TOOL AND FOR ALL
OPERATING SYSTEMS

TIME SAVINGS
SOFTWARE AND IT
ASSET
MANAGEMENT

AD HOC SW BULK
RELEASE ON ALL IT
INFRASTRUCTURE
ASSETS

Roth & Partners

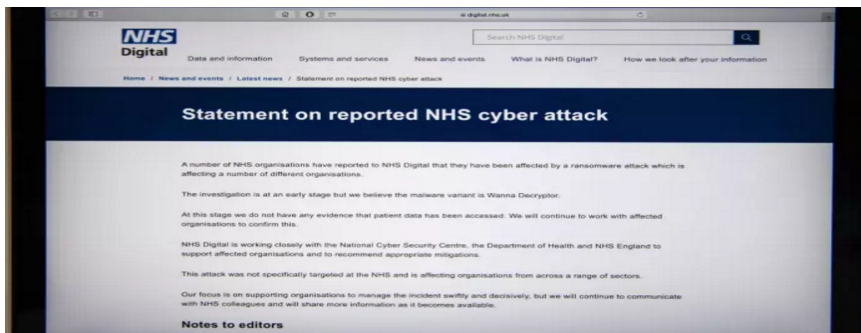

iTAM – TECHNOLOGY AND METHODOLOGY

Disaster recovery based on an open architecture, proactive, made-to-measure, safe and secure

Recovery capable to completely recover a standard MS-Windows PC in 5 to 10 minutes, complex specialized high-security PC with up to 500GB and 50+ applications requiring manual install in 35 to 40 minutes, set up a server within one hour only.

Encrypted traffic – no spying and malware-infiltration possible
Multiple availability of installation paths / distributed servers in the network increase security – one surviving server plus network connection is sufficient

Disaster recovery in minimum time to avoid operational down-times

Decreased lead time for the software recovery / installation by fewer management servers (one instead of several), software distribution and system integration with generic interfaces to popular CRM tools such as Remedy, SAP or MS.

OS independent + swift + cost-effective = safe

One server = one installation/license/maintenance/certification for live time asset management and provisioning data into CMDB

- + software asset management
- + license management
- + change control management
- + emergency patch management
